Polysulphate

Multi-nutrient fertilizer
Innovative, versatile and unique
“I grow asparagus, maize, tobacco, strawberries and other fruits. Since I started using Polysulphate, I have high quality produce that looks good, has a longer shelf-life and most importantly – secures a better price from customers.”

Michael Zapf, farmer
Introducing Polysulphate®

Polysulphate is a new 4-in-1 natural fertilizer for improved crop yields. Polysulphate contains four plant nutrients: sulphur, potassium, magnesium and calcium.

Although Polysulphate was first found almost 200 years ago in Europe, only recently has a large scale deposit been discovered and now mined by Cleveland Potash – 1,200 m underneath England’s North Sea.

Now this natural 4-in-1 fertilizer is available to farmers. All tests are conclusive – Polysulphate provides the best value for farmers, crop after crop.

Available in granular and mini granular grades (for direct application and bulk blending) and standard grade (for direct application and NPK granulation)

Ideal natural source for all crops, especially brassicas, cereals, legumes (soybean), vegetables, clover, grassland leys and silage crops

Fully soluble, with all nutrients available for plant uptake
The low chloride content makes it ideal for chloride-sensitive crops

Increases yields and improves crop health and vigour

Approved for organic agriculture in several European countries, USA and Canada
What’s in Polysulphate?
Polysulphate is the trademarked name for polyhalite, a naturally occurring mineral with the chemical formula: $K_2Ca_2Mg(SO_4)_4 \cdot 2H_2O$

- **48% $SO_3$ (19.2% S)** balances crop’s need for S and improves efficacy of other nutrients (e.g. N and P)
- **14% $K_2O$ (11.6% K)** as potassium sulphate, vital for improved crop health
- **6% MgO (3.6% Mg)** as magnesium sulphate, essential for photosynthesis
- **17% CaO (12.2% Ca)** as calcium sulphate, crucial for cell division and strong cell walls

Completely natural, mined, crushed, screened and bagged

Low carbon footprint fertilizer, helps growers achieve carbon targets demands

Polysulphate has multiple advantages for farmers. Now, for the first time, Polysulphate is available to everyone around the world.

Mined in the UK, ICL is the first – and only – producer in the world to mine polyhalite, marketed as Polysulphate.
